**Bo Lontum**
Project1 on S3-bucket

1) Creating a S3 bucket in us-east-1 and upload objects in it.

2) Enabling versionin

3) Creating a lifecycle policy [for previous version only] that will change your storage class **from Standard to Standard-IA after 30**, then **from Standard-IA to Glacier after 90**.

4) Replicating the bucket to a different region in the same account (us-west-1)

Upload

Objects are the fundamental entities stored in Amazon S3. You can use Amazon S3 inventory to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. Learn more

The time it takes to prepare a job is based on the size of the job's manifest and the time required to complete higher-priority jobs.

Amazon S3 > Batch Operations

Batch Operations Info

A job is used to execute batch operations on a list of S3 objects. The list of S3 objects is contained in a manifest object, which can be an S3 inventory report or a list of objects that you generate. After the total number of objects listed in the manifest has been confirmed, the job status will update to *Awaiting your confirmation to run*, and you must **Run job** within 30 days. Job events are published to CloudWatch Events. Jobs are deleted 90 days after they finish or fail. Learn more
